

1

Forwards, backwards, towards, away

Stand a student on the spot, with a hoop one step in front and the toy three steps to one side. Point to where they should move. Do not say the word. The class says it. Into the hoop is forwards. Back to the spot is backwards. A step to the side is towards the toy or away from it.

"I will show you the move. You tell me the word."

"Towards the toy, or away from it?"

2

Turning to face something

Stand a student on the spot facing a cone, with one cone to the side and one behind. Name a cone. They turn to face it, keeping both feet on the spot.

"Turn to face the cone behind you. Which way did you go?"

3

Left and right from where you stand

Put a band on one wrist. Stand beside the student, facing the same way, and turn left and right together. Then stand facing them and turn to your own right.

"I turned to my right. Which side was that from where you stand?"

"Why did my right look like your left?"

4

Facing decides forwards

Stand two students back to back and have them both take three steps forwards. They finish at opposite ends of the room and neither went the wrong way.

"You both went forwards. Why are you not in the same place?"

5

Undoing the move

A student turns to face the window and walks three steps. They then get back to the spot, facing the way they started, saying each move before they make it.

"Say the move that undoes it before you make it."
