

Number words to one hundred activities

1 Say it, write it

Call a number — 43, 71, 28, 95, 60, 100. Students write the digit form and the word form, saying the number aloud first and checking the hyphen and the zero.

"Digit form on the left, word form on the right — say it aloud first."

"Does sixty need a hyphen? Did you remember the zero — 60, not 6?"

2 Word to digit

Write word forms — sixty-two, ninety-one, forty, one hundred. Students write the digit form, remembering the zero placeholder.

"Read it, say it, write the digit. Forty — how many ones? Zero. Write 40, not 4."

"One hundred — three digits. Which ones?"

3 Match digit, word and grid

Students match three cards for each number — the digit form, the word form, and the grid-position card (a 0–99 grid with one cell shaded). The grid confirms the match.

"Match all three — the digit, the word, and where it lives on the grid."

"Could any other digit match both the word and the shaded cell?"

4 Non-example: spot what is wrong

Show incorrect forms — "forty three," "fivety-two," "hundred," and mixed forms like "4ty-seven." Students find the error and fix it.

"Why does forty-three need a hyphen but seventy does not? What is wrong with fivety-two?"

"'4ty-seven' mixes digits into the word — is that a real way to write it? Could a reader tell?"

Digits & words — match set A: digits and words

Print on A4. Cut out. Match each digit card to its word card, and to its grid card.
