

Practice addition then subtraction to reverse

There are 5 children playing in the park. 2 more came to play.

Write an addition equation to show the 2 children joining the 5 children.

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

The 2 children leave again. Write a subtraction to show the 2 children leaving.

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

Practice addition then subtraction to reverse

There were 6 birds sitting in a tree. 2 more birds flew in and joined them.

Write an addition equation to show the 2 birds coming to the tree.

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

The 2 birds leave again. Write a subtraction to show this.

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

Practice addition then subtraction to reverse

6 leaves fell onto the path. 4 more leaves fell down.

Write an addition equation to show this.

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

The 4 leaves are blown away. Write a subtraction to show this.

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

There are 15 children playing in the park. Two more children join them.

Show this with a drawing.

Write the addition equation to show this.

$$\underline{\hspace{2cm}} + \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

Write the subtraction equation to show the 2 children leaving again.

$$\underline{\hspace{2cm}} - \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

Ethan saves 18 dollars. His grandmother gives him another 4 dollars.

Draw a picture to show this.

Write an addition equation to show this.

$$\underline{\hspace{2cm}} \quad \underline{\hspace{2cm}} \quad = \quad \underline{\hspace{2cm}}$$

Write the subtraction equation to show Ethan spending the 4 dollars his grandma gave him.

$$\underline{\hspace{2cm}} \quad \underline{\hspace{2cm}} \quad = \quad \underline{\hspace{2cm}}$$
